

# NAIST Academic Repository

# naistar

Disseminate research results  
to the world!!

The naistar aims to collect research materials and distribute them globally.

## Benefit for naistar registration

- The quotation number of times may increase by accessing by more researchers.
- To register a sustained URL(DOI) can be prevented a link from being expired.
- Anyone can access without cost or photocopying.

## NAIST has the Open Access Policy.

NAIST OA Policy provides our research outputs free of charge to contribute to the development of cutting edge research and education, and also to contribute to society.

The OA policy is a statement of intention by the entire institutional organization in order to promote the dispatch of the research outputs spontaneously by faculty.

In cases when the author wishes, selecting of open access to the institutional repository where a co-author belongs or to an OA journal may be chosen.

OPEN ACCESS

Open access is unrestricted online access to peer-reviewed scholarly research, free of cost or other access barriers.

Data can be updated from the Research Achievements Management System.

## Please help us register the repository!

# Q & A

## Q1 What is an "Institutional Repository" ?

**A** The NAIST Digital Library operates "naistar" as our "institutional repository", which aims to collect digital research materials produced at NAIST, **storing and saving the materials on a permanent basis**, and providing them for public viewing via Internet free of charge. As of March 2024, more than 5,900 repositories in the world and more than 800 in Japan provide their research and teaching output to audiences globally.

## Q3 What is the difference from releasing my article on my HP ?

**A** The NAIST Digital Library maintains and preserves your work in "naistar", so you can **avoid broken links** in citing your research with permanent URLs, **get top search results** in Google, IRDB, or OAIster, and see your research **cited more frequently**.

## Q5 Is it possible to deposit research materials whose copyright belongs to the publisher ?

**A** Though most publishers permit using the final draft post-referring of papers in institutional repositories, each publisher has different policies concerning self-archiving. **After the Library confirms the copyright policy**, the submitted article will be deposited to "naistar".

## Q7 What should I do to deposit my research materials ?

**A** The Library will deposit open research materials such as Grant-in-Aid Scientific Reports, technical reports, and videos without any formalities. **When you deposit your journal articles and/or conference papers, you may be asked to submit the final draft post-referring depends on the copyright.**

## Q2 Is the repository necessary even though we can read articles in online journals ?

**A** While online journals are limited to those who have contracts with the publishers, the repository **contributes to the development of academic research via Internet free of charge.**

## Q4 Does depositing my research material mean transferring the copyright ?

**A** The copyright of research materials **shall remain with the copyright holder** and not be transferred to the Library when they are deposited to "naistar".

## Q6 What kind of research materials are eligible for depositing ?

**A** Any research materials in electronic form are eligible. When an article only exists in paper format, the Library will scan it. You can select "Whether this paper can be registered in naistar or not" from the registration items of the achievement data in the NAIST Research Achievements Management System.

## Q8 What is the final draft post-referring version?

**A** At each step towards article submission, there are different article versions with the author and publisher. **The final draft post-referring version is the final author's version which has been accepted by the publisher.** This version will eventually be formatted and released as the "Publisher version" in online journals.
